

Claim Attachment Document Exchange (CADX[®])

CADX[®] was born through a collaborative process between providers and payers called the Business Policy and Process Improvement (BPPI) project developed by the Hospital Association of Southern California. The BPPI Project identified claim attachments as an area of major concern in the revenue cycle process that all team members experienced. The BPPI members developed the business concepts and worked with HealthLogic Systems Corporation to build a solution, CADX[®] (Claim Attachment Document Exchange).

CADX[®] was piloted by Blue Cross of California and three Southern California hospitals in 2001-2002. Since then, CADX[®] has been marketed nationally as a stand alone product and as part of HealthLogic's suite of revenue cycle management products. Claim attachments have always been a major problem for providers, and payers, alike. CADX[®] provides an electronic, HIPAA compliant solution for that problem.

CADX[®] has an innovative cash positive approach for hospitals and other providers to manage requests for attachments from health plans and others. Requests received by any media may be

entered, responded to by scanning, uploading or faxing, and completely managed by CADX[®] on-line.

CADX[®] is a web based tool that enables the transfer of requests for information and the submission of that information, to facilitate the health plan's review of provider claims. CADX[®] can be utilized in provider's business offices, medical records, utilization management, and discharge planning departments to scan, upload and transmit documents. These electronic documents are then stored in CADX[®]'s secure repository and are delivered to the designated recipient electronically or by fax, depending on the requirements of the Payer.

CADX[®] does not require large purchases of capital equipment. CADX[®] users require only a standard PC, a scanner, and Web access. All the software and technology reside at HealthLogic Systems Corporation's EHNAC accredited clearinghouse maintained on a 24-7 basis with redundancy and backup. CADX[®] meets or exceeds all HIPAA requirements including the emerging attachments transaction rule.

The benefits of CADX[®]

- Positively impacts cash flow and claims processing time
- Reduces days in accounts receivable by ten (10) days or more
- Lowers costs per transaction by as much as \$25
- Eliminates overnight and USPS mail costs
- Improves workflow
- Cannot lose or misplace records
- Provides a complete Transaction Audit Log at all times
- Can integrate with AR and Document Management Systems
- Provides worklists and management reporting tools
- On-line patient centered document repository
- Is your HIPAA solution for claims attachments!
